

# How I finally started making \$900 per month on autopilot with adsense!

Hey guys i haven't contributed much to the great community here yet so this is probably my first useful post. This is aimed to help all those newbies out there who aren't making any money yet or for those who want to make more money on auto pilot =).

First off a little background history about me. My names peter and i've been involved in IM for almost a year now. For the majority of the time it was a pain in the ass for me, trouble with information overload, not knowing where to start, buying heaps of products that promised me lots of money for no work. Fast forward til now i studied hard, did not give up, plenty of trial and error, make lots of mistakes and have learnt from them and have found a system that works for me every time.

Using adsense i am finally making a steady \$900 per month on complete auto pilot. (PS there are no shortcuts to making money online and it requires work and time)

1. Use [micro niche finder](#) and [google keywords tool](#) to find keywords and i get rid of anything with higher than 25 SOC in MNF. I choose keywords with consistent trends and make sure it gets at least 2400 local search using the exact search NOT broad.
2. I check my competition for the top 5 results in google and check if they have under 500 [backlinks](#) each. Obviously the less [backlinks](#) they have the better for you.
3. [Get a domain](#) with my keyword in it. I only choose .com .net and .org domains.
4. Install wordpress and choose an adsense ready theme - doesn't need to be anything fancy, in fact all my sites themes are really basic.
5. Write an article about 400-1000 words(sometimes when im writing an article things just flow into my mind and i just keep writing and writing). Make sure keyword density is between 1%-4%. Make sure i have good on page seo - Title, H1 tags, etc. I use a free program called traffic travis and use the page analysis function to check my pages for their on page seo and make sure they get at least an A or A+.
6. I have only 4 pages on my sites. Main page where the article is on, about us, contact us, and privacy policy. - The privacy policy page is SOOOO important and yet so many people miss out on it giving google a reason to ban them when they start making a decent income with adsense. - Install the easy privacy policy plugin or something similar and you'll be fine.
7. I put a 336x280 adsense text ad underneath the title. A 300x250 adsense image ad on the sidebar, and then a 468x60 text and image adsense ad directly after the post.
8. Now that your site is ready you gotta promote it and get it to the 1st page of google.

Time to build links! There are 2 ways that i have tested building links for these sites:

- [Spin my article](#) to at least 30% unique and then i submit to article directories and web 2.0 sites like squidoo, hubpages, etc and link them all back to my website. Then Social Bookmark and ping every single url i create to make sure they get indexed. + i submit all the rss feeds. (i use senuke for all this work)

- the second method which i prefer and is much easier is by using angela and pauls profile backlinks. I DO NOT vary my anchor text. And i keep building these backlinks and social bookmark and ping every link i create. You won't see the results right away because they probably won't be indexed yet but usually after about 2 weeks i see a big jump in the serps. Some people might argue that it's not good to not vary your anchor text but so far its been fine for me and im still at 1st or 2nd position for every single one of my keywords. And i build as many links as i can be bothered with each day.

And yeah that's it guys I stop or slow down on my link building once i get to 1st or 2nd position of google for my selected keyword. Just if anybody wondering i have about 60 of these sites and it took me about half a years work to get to here. And yes after all the hard work and link building and boring stuff then you can relax afterwards once your site is on the 1st page of google making you decent money. All the sites combined i make about \$30 a day, doesn't seem like much but hey its on complete auto pilot and its the best waking up each morning and seeing i've made about \$30 each day for doing nothing.

Sorry for the real long post and hope it helps you guys! Hit the thanks button if you've found it helpful =>
